

CEP:

Instrutor:

Orientação pedagógica:

Segmento e curso:

Elementos de competência:

Descrever características de diferentes espécies animais; Utilizar linguagens artísticas visuais para apresentação de ideias.

Marcas Formativas:

- ☒ Comunicação e colaboração
- ☐ Autonomia digital
- ☒ Domínio técnico-científico
- ☐ Atitude sustentável
- ☒ Visão crítica
- ☒ Atitude criativa e empreendedora

Aprendizagem Integradora:

- ☐ Sim
- ☒ Não

Prática Inclusiva:

- ☐ Sim
- ☒ Não

Prática de Fomento à Inclusão:

- ☐ Sim
- ☒ Não

Situação de aprendizagem:

Em uma das unidades do livro didático do Young 1, estudamos algumas características e conceitos referentes ao reino animal. Após isso, propus um projeto para finalizar o conteúdo em que cada aluno recebeu o nome de um animal exótico (muitas vezes ameaçado de extinção). A tarefa consistia em pesquisar e apresentar à turma informações relevantes, como descrição física, hábitos alimentares, habitat natural e curiosidades que considerassem interessantes. Além disso, os alunos deveriam sumarizar suas pesquisas na forma de algum projeto visual, que seria em seguida exposto na sala de aula, formando uma grande montagem artística.

Como resultado, os alunos demonstraram poder de síntese para condensar as informações que pesquisaram em um espaço curto, bem como foram bastante criativos na escolha do meio e da forma que utilizaram para tanto. Pudemos constatar que os alunos trouxeram para a sala de aula manifestações artísticas tais como: desenho, colagem (física e digital), *lettering* e editorial. Ao final das apresentações, os alunos dispuseram seus trabalhos na parede, formando uma montagem para marcar o final do projeto.

A prática foi avaliada como satisfatória, destacando-se o desempenho dos alunos que superaram as expectativas ao utilizar o idioma-alvo de forma eficaz para comunicar suas ideias e demonstrar criatividade na apresentação de seus resultados.

EVIDÊNCIAS | Aprendendo Inglês com o Reino Animal

• Habitat:
• Range:
• Feeds on:
• Gills: Montezuma,
• Gills: Desamini

Komodo dragons can eat a lot of things, including insects, small reptiles, mammals, snakes, etc. and they can eat other Komodo dragons. They prefer to eat big pieces, they are usually coming together only to breed and eat. Their physical characteristics are: long horns, long body, strong and agile muscles and extremely limbs.

Curiosities:
• Komodo dragons breathe venom;
• They are the world's largest living lizards;
• They have a lot of fictional stories about them.

Qilin The Qilin is a mythical Chinese creature, said to have the body of a horse, the head of a deer, the wings of a dragon, and the tail of a buffalo. It is said to be a good omen, and is often depicted in art and literature.

Qilin is a mythical creature, it has the characteristics of a horse, a deer, a dragon, and a buffalo. It is said to be a good omen, and is often depicted in art and literature.

Physical characteristics:
• They have specific physical characteristics, such as a long, curved body, a long, curved tail, and a long, curved neck. They are usually found in the mountains of China, and are often depicted in art and literature.

Where does it live?
• Wild Okapi lives exclusively in the Ituri Forest in the Democratic Republic of the Congo in Central Africa.

Curiosities about it:
• The Okapi is a very rare animal, and is often depicted in art and literature. It is said to be a good omen, and is often depicted in art and literature.

SHOEBILL

Where he lives
The shoebill inhabits dense swamps and flooded areas, preferring environments with floating vegetation, such as reeds and papyrus. They tend to live near bodies of water where their main source of food is abundant.

What he eats
The shoebill diet is mainly composed of fish, especially fish length and shape. However, they can also capture frogs, snakes, small crocodiles and even small mammals. Their hunting ability is impressive, as they remain motionless for long periods before attacking their prey with precision.

Habits
The shoebill is known for his lonely behavior. It is an extremely patient bird and can be completely motionless for hours while waiting for a prey. When they catch a prey, they shake their heads to get rid of any vegetation or dirt, before swallowing.

Curiosity
An interesting curiosity about the shoebill is the unique sound it produces when hitting the beak. This high-pitched sound is used both for peer communication and to intimidate potential predators or competitors.

Physical characteristics:
